

## GOING PLACES?

A placed horse generally describes a horse which finishes in 1<sup>st</sup>, 2<sup>nd</sup> and 3<sup>rd</sup> place and for the Quartet 4<sup>th</sup> place as well. Let's now take a look at some other bets involving placed horses.

### Play the PLACE ACCUMULATOR

The **PLACE ACCUMULATOR** BET is a great bet involving selecting horses to run 1<sup>st</sup>, 2<sup>nd</sup> or 3<sup>rd</sup> in the seven consecutive Place Accumulator races. To make your life easier, a permutation bet can be taken to improve your chance of winning i.e. more than one horse in each race. To calculate the cost of your "perm" just multiply the number of horses that you have selected in each race by each other.

Still think it sounds difficult?? Well, to make it even easier or more cost effective, you can take a fractional bet which means that you pay a fraction of the cost of the bet - to suit your pocket - and if you win you are paid out the same fraction of the full dividend. Simply put, spend 50% of the full bet cost and get paid out 50% of the full unit dividend if you're a winner. Fractional bets are subject to the R6 minimum bet.

### Try a TRIFECTA or a quick QUARTET

Much quicker to win because they are available on every race, the **TRIFECTA** and **QUARTET** bets offer an exciting alternative. The Trifecta is as easy as 1-2-3 and involves selecting the first 3 horses past the post in the correct order. The Quartet involves the first four horses past the post, is more difficult to win than the Trifecta but pays higher dividends. Most Trifectas and Quartets are taken using permutations. To determine the cost of your "perm" an "easi-calc" schedule is available in the Racecard. Fractional bets can also be taken.
